

# Photo Snow Globe Craft

## Supplies

To make a photo snow globe, you will need:

- [Printable Snow Globe template](#)
- 4×6 photo of your child – *You want the child to be about 4 inches tall in the printed photo. If you are taking a photo vertically, leave room above and below the child. If you take a horizontal photo, do NOT leave any room above and below the child.*

- 7 inch clear plates – *Found at the dollar store*
- Epsom Salt – *You could use fake snow instead, but I love the sparkly look of Epsom Salt! Look for it at the dollar store.*
- Snowflake or other winter decorations (optional)
- Hot Glue Gun

## How To Make A Photo Snow Globe Craft

Print it out at 100% or full size on card stock. It looks like this:

If you want to personalize the snow

globe with a name and date, you can use a white or silver paint pen to write it on after printing.

To assemble, cut out the snow globe. Then cut your child out of a vertical 4×6 photo.

NOTE: the photo will fit best if the child is **about 4 inches tall** once it's printed, so be sure to leave some room above *and* below the child when taking the photo.

Glue the photo onto the snow globe. Glue on snowflake decorations or have your child draw in snowflakes or a holiday scene around the photo.

Pour about 3 tablespoons of Epsom Salt over the photo.

Grab a 7 inch clear plastic plate and put hot glue all around the raised edge. Flip it over to glue it down to the snow globe. \*\*\*Make sure an

adult does this part of the craft\*\*\*

You want the edge of the plate completely sealed to the snow globe so that salt doesn't fall out when you shake it, so you make sure to go around the edge of the plate and add more hot glue.

Done! Now kids can play with their personalized photo snow globe.
